

Should future wireless standards for 6G and WiFi follow the conventional standardization approach or should there be room for more chaos in the order?

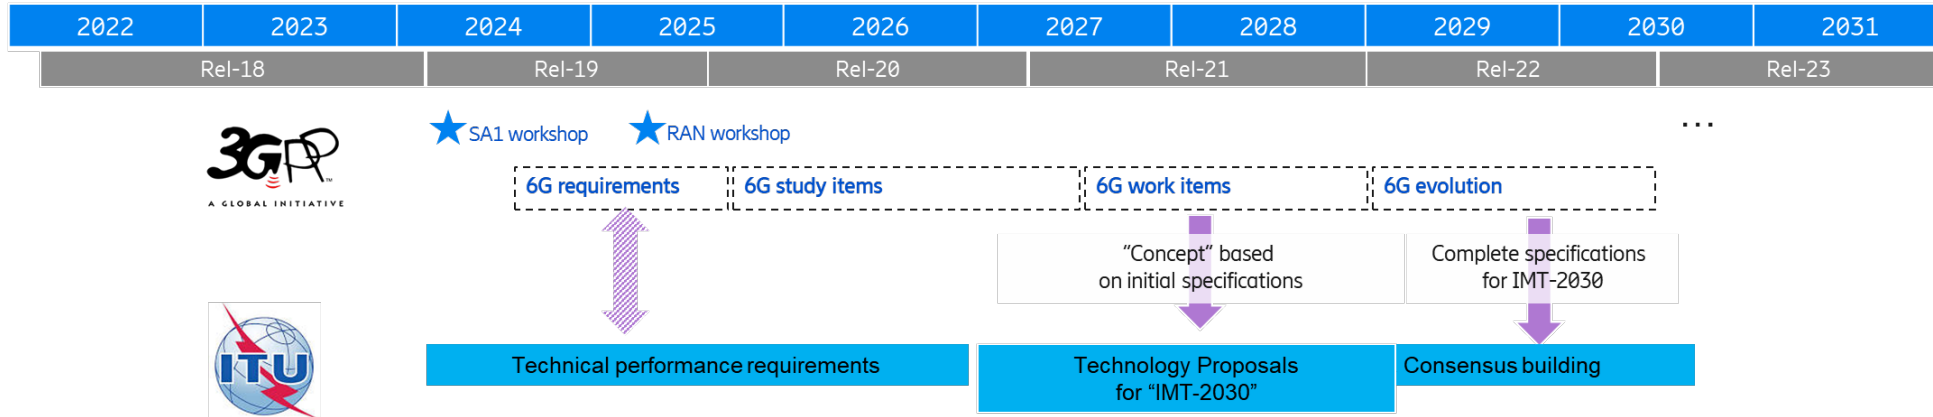

Order ...

or

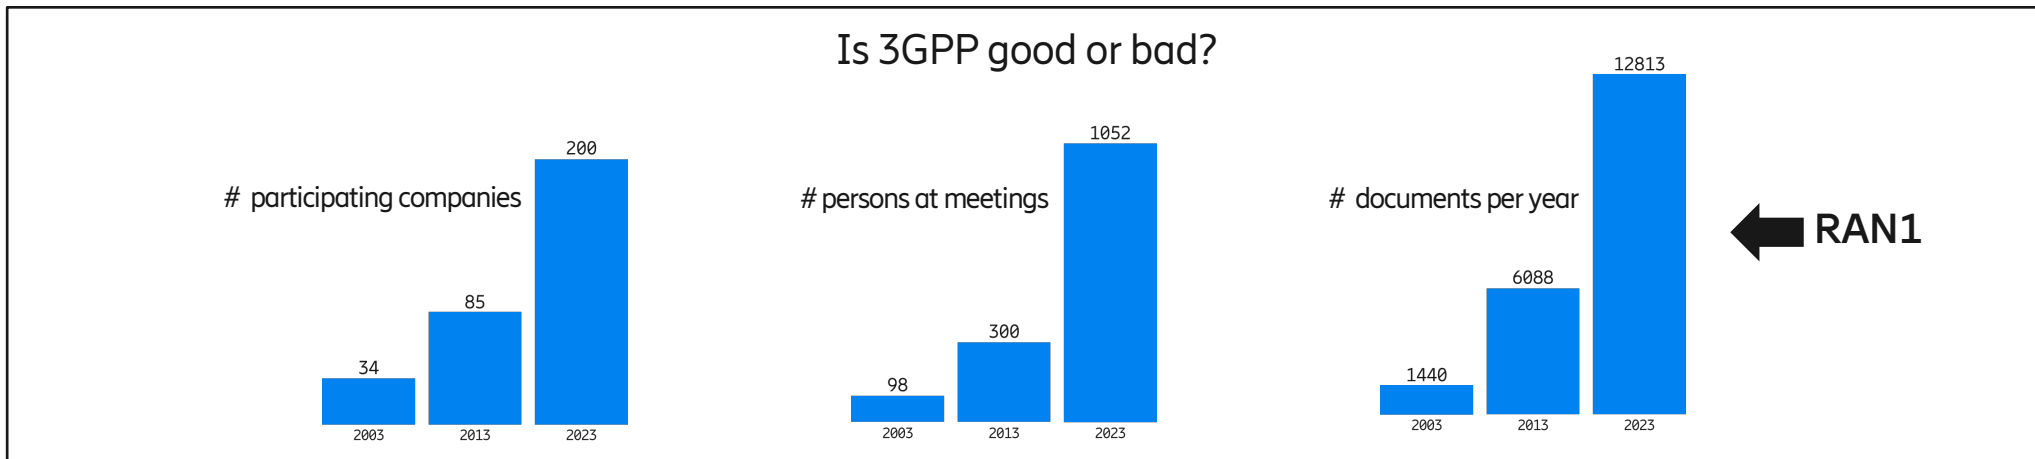

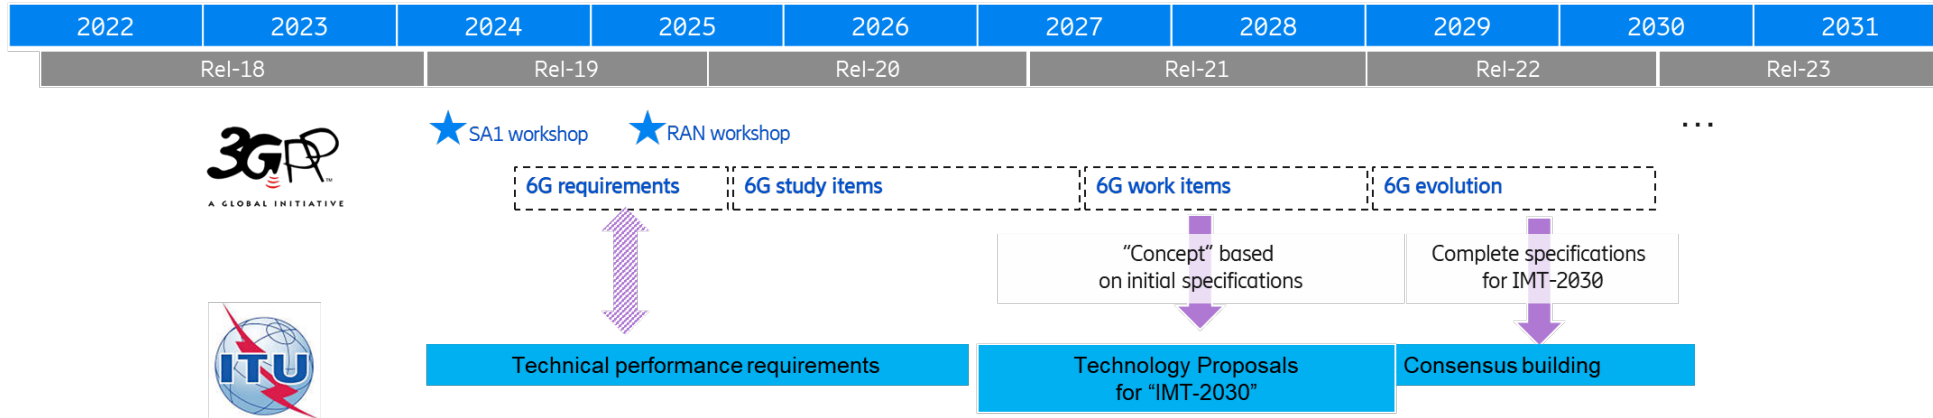

... chaos?

3GPP and ITU have already started on the path towards 6G

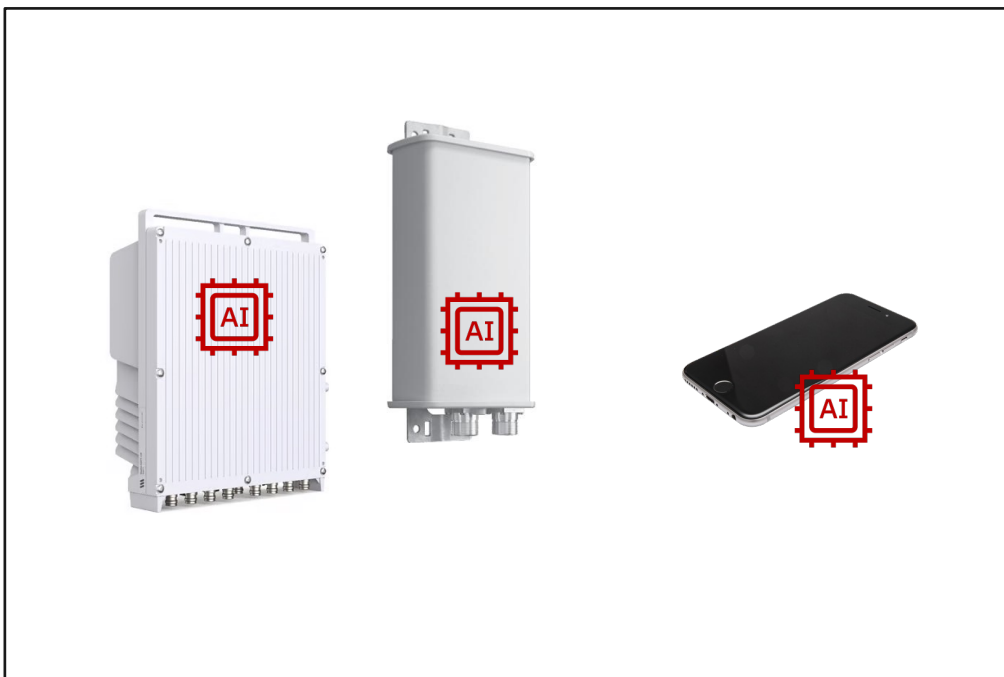

3GPP and ITU have started the path towards 6G

What role do you see for AI in wireless systems/standards?

What role do you see for AI in wireless systems/standards?

AI/ML will be one important technology!

Many different cases

Within technology/standards and/or when developing technology/standards?

What functions?

- Physical-layer functions? Higher-layer functions? Radio-network management? Deployment?

Off-line training vs on-line training?

One-sided models vs distributed models?

...

Is open-source an opportunity or a threat?
