THE EUROPEAN PARLIAMENT FOR THE DAWN OF 5G

"During the last 2 years in the European Parliament we have been making a strong case arguing for the completion of the Digital Single Market and the emerge of the Internet of Things. 5G will be a factor of primordial importance in the unravelling of the new digital era in Europe. There are many parts that puzzle us as we are paving our way to the digital age. Challenges such as the reform of spectrum, standardization, interoperability, access networks, roaming and most importantly potential delays of implementation by member states risking to create a fragmented digital market making us unable to ripe the benefits of technology. The very success of EuCNC is that it brings together the stakeholders and provides with an opportunity to achieve tangible progress in the field. Tangible process that it inclusive and takes into consideration the industry, the citizens and the regulators and most importantly making sure that the EU will create a Digital **Single** Market leaving no Member State behind."

*Eva Kaili, Member of the European Parliament & 1st Vice President of STOA
Opening address in the context of EuCNC2016*
